

# Where California High School Students Attend College

## Appendix

In the main report, we provide information on first-time college enrollment for the census of California public high school 11th grade students expected to graduate high school in the spring of 2014, 2015, and 2016, respectively. This Appendix provides tables of college enrollment statistics by institution type and by student subgroup for each of the 58 counties in California.

For each county we provide two tables, one depicting the *percent* of high school students enrolled in each of the institution types and one providing the *number* of high school students enrolled in each of the institution types. Each column represents a separate subgroup of students. We report summary statistics only when the enrollment number in each cell meets our minimum reporting requirements of greater than 15 students. Cells not meeting these requirements are denoted with \*\*\*.

In some cases, the percentages reported in our main report may be slightly different than the percentages provided in the tables in this Appendix; this is due to rounding and collapsing of institutional categories to maximize cell size necessary for reporting.

Please note the following definitions of institution type and student subgroup categories:

- **Private in-state:** This category includes both 2-year and 4-year private institutions.
- **Out-of-State:** This category includes both 2-year and 4-year institutions, as well as both private and public institutions.
- **Socioeconomically Disadvantaged (SED):** This student subgroup includes students designated as SED by the California Department of Education in high school. Students who meet the definition of socioeconomically disadvantaged either qualify for the free or reduced price school lunch program or do not have a parent who graduated from high school.

**Table 1a: Percent of California Public High School Students Enrolled in College**

Enrolled In	All	Gender		Race				SED
